PURUS

Purus' V55 Plaster Separators are designed to stop the deposition of substances such as plaster and sand, which are often flushed through the outlet and block the sewer pipe. These are usually placed in connection with stainless steel workbenches and laundry chutes. Solid particles are separated from the water and are held back in the bottom of the bucket, which can then be removed for emptying and cleaning. The V55 Plaster Separators are often used in hospitals, dental surgeries, art facilities, art colleges and universities.

Specifications

Item Number 803	37905
-----------------	-------

Electrical Data	13
------------------------	----

Itam	Color	Stainless
116111	V () (() (Statilless

Material	PP, EPDM, Stainless steel 1.4301
----------	----------------------------------

Outlet Dimension G40

Pressure Flow 1,5 l/s Temp

Size 360x370x430 mm

Surface Polished

Version Internal x external thread
